

A.C.E.

Anomaly Containment & Examination Unit

CLEARANCE: INTERNAL USE ONLY

FILE TYPE: Initial Survey Log

LOCATION: Zoltins

DATE: [REDACTED]

AUTHOR: Forward Unit ■

1. Overview

A.C.E units were the **first external organization** to arrive at the Zoltins server cluster. At the time of arrival, the environment was **stable, populated, and cooperative**.

No immediate hostilities were detected.
No anomalous resistance was encountered.

However, multiple inconsistencies were noted.

2. ENVIRONMENTAL CONDITIONS

- Server performance: nominal
- Player activity: casual, creative, uncoordinated
- Map rotation: standard community patterns

Despite this, operatives consistently reported the same sensation:

“Everything worked — but none of it felt untouched.”

Visual corruption was minimal and non-intrusive:

- Slight prop desyncs
- Lighting inconsistencies between sessions
- Structures persisting longer than expected

These were initially attributed to standard Source Engine behavior.

They were not.

3. EARLY ANOMALIES

The following irregularities were observed within the first 72 hours:

- Maps appeared to “remember” previous sessions
- Destroyed areas rebuilt themselves inaccurately
- Props placed in identical locations across unrelated maps
- Identical player behaviors repeating without coordination

No hostile entities were recorded at this stage.

No references to “the Meating” existed in logs at this time.

4. A.C.E PRESENCE

A.C.E established oversight under the assumption of **preventive containment**.

Important clarification:

A.C.E is a multi-server GMod organization.

Zoltins was not unique in its initial classification.

It was one of several monitored environments.

However, it was the **only server** to exhibit:

- Persistent cross-map behavioral patterns
- Environmental reactions to player destruction
- Long-term structural drift

Zoltins was flagged for **continued observation**, not intervention.

5. INITIAL ASSESSMENT

At the time, the working theory was simple:

- The server was calm
- The players were unaware
- The corruption was passive

A.C.E believed it had arrived early.

This assessment was incorrect.

CLOSING NOTE

“The server welcomed us.

Not as guests.

As something it had already accounted for.”

Further documentation was approved shortly after this report.
