Clearance Level: 2

Subject: "White Maggots" — Harmless Mobile Organisms

Status: ACTIVE / MONITORED

SUMMARY

On [REDACTED], multiple field observers reported the sudden appearance of small, pale organisms within a residential district of **rp_nyc**.

The entities — colloquially referred to as "*White Maggots*" — appear to be approximately the **size of a standard soda can (12 oz)** and exhibit **non-aggressive, rhythmic movement patterns**.

Though initially mistaken for props or debris, close inspection confirmed independent motion and sound generation.

The entities are considered *harmless at this time*, but their **origin remains unknown**.

PHYSICAL DESCRIPTION

- **Size:** ~15–18 cm in length, cylindrical shape resembling larvae.
- **Color:** Uniform white, faint translucency under direct light.
- **Surface Texture:** Smooth, soft, slight reflective sheen when illuminated.
- **Sound:** High-pitched squeak emitted every 4–6 seconds, coinciding with movement pulses.
- **Movement:** Shifts position approximately every 5 seconds — brief twitch or roll, then idle.

No biological residue or scent detected. No visible eyes, mouth, or limbs.

BEHAVIORAL OBSERVATIONS

- Entities appear to "hop" or shift position in small increments rather than crawl.
- Typically gather in groups of **4–12**, forming loose circles or lines near streetlights and manholes.
- Display no reaction to player proximity, tools, or physics impact.
- When picked up with the Physics Gun, they emit a faint hum before freezing temporarily.
- Squeak sound carries faint data interference on audio spectrograms.

Status: ACTIVE / MONITORED

INCIDENT LOGS

Date	Location	Observed Behavior	Outcome
██████████	rp_nyc, Chinese District	Initial cluster (8 specimens) found near vending machines	Collected for analysis
██████████	rp_nyc, King Fries	Two entities merged into one mass, later split	No aggression
██████████	rp_nyc, Subway entrance	Group followed a dropped soda can for 40 seconds	Entity behavior logged as mimicry

THEORIES / NOTES

- Believed to be **non-biological entities**, possibly reactive to in-game audio or prop presence.
- A faint **server heartbeat spike** coincides with each collective movement event (every 5 seconds).
- Locals describe them as "cute but unnerving."
- No connection to *The Meating* cluster has been confirmed, though shared code signatures are being investigated.

RECOMMENDED CONTAINMENT PROCEDURE

1. Observation perimeter established around the affected district.
2. Avoid crowding or damaging entities — destruction resets their spawn cycle.
3. One live specimen to be transferred to **A.C.E. Site-09 Bio Analysis Wing** for further study.
4. Continuous acoustic monitoring to identify correlation between squeak intervals and server ticks.

CURRENT STATUS:

Entities remain contained within rp_nyc parameters.

No signs of aggression or replication beyond the initial zone.

Further observation pending authorization for limited player interaction study.
