Anomaly Containment & Examination Unit

**FILE DESIGNATION:** AR-77-Δ "MEATING REALM INCURSION"

**CLEARANCE LEVEL:** 4+ REQUIRED

**DATE:** █/█/█

**STATUS:** TERMINATED — PARTIAL FOOTAGE RECOVERED

## 1. MISSION OBJECTIVE

To deploy a remote-controlled aerial drone (Model: A.C.E Recon-9B) into a recently discovered rift connected to the extradimensional zone commonly referred to as the **"Organism."**

Objective parameters:

- Map initial terrain
- Identify structural anomalies
- Confirm existence of the entity class "Meatlings"
- Locate remnants of █
- The drone was equipped with reinforced signal boosters and a biological hazard analysis suite.

## 2. ENTRY

At **14:03**, the rift stabilized for a 3-minute window.

The Recon-9B entered without resistance.

Initial conditions:

- **Atmosphere:** thick, organic particulate resembling aerosolized tissue
- **Ground texture:** fibrous, pulsating surface exhibiting slow contractions
- **Auditory environment:** low-frequency rumbling consistent with cardiac resonance

A heartbeat was recorded every **9.4 seconds**.

# A.C.E.

Anomaly Containment & Examination Unit

**FILE DESIGNATION:** AR-77-Δ “MEATING REALM INCURSION”

**CLEARANCE LEVEL:** 4+ REQUIRED

**DATE:** [REDACTED]

**STATUS:** TERMINATED — PARTIAL FOOTAGE RECOVERED

## 3. VISUAL DISCOVERIES

For the first **46 seconds**, the drone captured stable footage.

Visible within the realm:

- Large vascular structures spanning the distance like suspended bridges
- Translucent membrane walls shifting between forms
- A mass resembling a **torsioned spinal column**, size estimated at 12 meters
- Two distant humanoid silhouettes moving in synchronized, **unnatural intervals**
- Engraved markings along the ground spelling fragments of [REDACTED]

The drone’s onboard AI flagged the markings as a possible **designated name** or **command phrase** of the [REDACTED].

Full transcription of the legible text:

“THE BODY... REMEMBERS... THE ONES WHO—[REDACTED]—RETURNED...”

## 4. CRITICAL EVENT

At **00:47**, the drone’s stabilizers began receiving irregular interference.

Footage showed:

- A large structure beginning to rise from beneath the terrain
- The surrounding “ground” retracting, almost as if revealing a wound
- Several smaller Meatlings clustering around the rising mass
- A final glimpse of a **colossal anatomical shape**, believed to be a **portion of the [REDACTED] itself**

Immediately afterward, all audio overloaded with a sound resembling:

**wet breathing,**  
**human whispering,**  
and **mechanical grinding** layered together.

At **00:52**, the feed cut to black.

## 5. POST-MISSION ANALYSIS

# A.C.E.

Anomaly Containment & Examination Unit

**FILE DESIGNATION:** AR-77-Δ "MEATING REALM INCURSION"

**CLEARANCE LEVEL:** 4+ REQUIRED

**DATE:** ■/■/■

**STATUS:** TERMINATED — PARTIAL FOOTAGE RECOVERED

Signal logs indicate the drone was not destroyed — it was **absorbed**.  
Energy readings spiked for 0.2 seconds at levels impossible for organic matter to generate.

Footage recovery yielded *only* the 52 seconds above.  
No physical drone components have been retrieved.

## 6. CURRENT HYPOTHESIS

The Meating Realm is not a location.  
It is a **system**, or possibly **the interior of a megastructure organism** with:

- independent regions
- organ-like functions
- and behavior consistent with a **single shared consciousness**

The entity referred to as **[REDACTED]** may represent:

- a core organ,
- a central intelligence,
- or a **host body** for the Meatlings.

Further incursions are suspended indefinitely.

## 8. RECOVERED VISUAL EVIDENCE

**STATUS:** *Only 2 frames remained intact.*
